YINUO (DORINE) LIU

Ann Arbor, MI | dorineyinuoliu@gmail.com | linkedin.com/in/yinuoliu-dorine

EDUCATION

University of Michigan, School of Information, Ann Arbor, MI — Expected May 2027
Master of Science in Information, Big Data Analytics
Coursework: Applied Machine Learning, Data Mining, Information Visualization, SQL & Databases, Statistics

Pratt Institute, Brooklyn, NY — May 2025
Bachelor of Industrial Design

SKILLS

Data: Python (pandas, NumPy, Matplotlib, Seaborn, GeoPandas), SQL (MySQL), Tableau, Excel, Git
Research & analysis: user interviews, affinity mapping, field observation, financial benchmarking
AI tools: Claude, ChatGPT, Cursor | **Languages:** Chinese (native), English (fluent)

EXPERIENCE

Nuoteng Consulting, Beijing, China | Data Analytics & Business Consulting Intern — May–Aug 2026

- Spent a week on-site at a client in Chengdu turning paper-based business records into a multi-table SQL database, then built Tableau dashboards on top so the client could look up and summarize records instead of searching through files by hand.
- Wrote a Python script to screen, merge, and summarize 70+ messy client files into one structured dataset.
- Consolidated 16 expense tables by account and year and charted cost trends in Tableau; benchmarked five listed peer companies on key financial ratios using their annual reports.
- Supported pharmaceutical compliance consulting for multiple clients, drafting and revising board-level risk analyses, service-provider audit reports, and client proposals; used AI tools for first drafts and checked every output against the source documents.

PwC Management Consulting | Project Assistant — May–Aug 2023

- Researched charging habits of 200+ EV users across four charging providers, identifying three main pain points that shaped service-experience recommendations.
- Compared revenue, cost, and tax structures of five industrial equipment manufacturers in Excel and wrote an industry analysis report on how their operations differed.
- Helped collect in-store movement and interaction data from 150+ customers at an automaker's experience store and proposed two experience improvements.

BrainUp Technology | Product & Research Intern — May–Aug 2021

- Tested a head-worn EEG device as a pilot user, completing on-screen tasks while the team collected signal data; found that small shifts in fit degraded the signal and helped redesign the strap for a steadier fit.

PROJECTS

NYC 311 Heat Complaints Analysis | SI 649 Information Visualization, individual — Oct 2026

- Pulled ~340K NYC 311 heat and hot-water complaints (2025–26 season) via API, joined them with NOAA daily temperatures and Census (ACS) income and renter data by date and ZIP code, and cross-checked counts in SQL (DuckDB).
- Built four visualizations with pandas and GeoPandas: on days with a low below 15°F, median no-heat complaints were ~10x those on 45–55°F days; complaints per 1,000 renter households fell as income rose (Spearman $\rho \approx -0.57$); one address had complaints on 198 of 243 days.

Ann Arbor Data Dive 2025 | 1st Place, Descriptive Analysis Track — Nov 2025

- Led a team of five and wrote most of its Python code, cleaning 500K+ campaign-donation records with pandas and NumPy.
- Defined a donation-surge rule (50+ donations in a day and at least 5x the daily average); found 30 surge days across 9 campaigns.
- Built four visualizations in Matplotlib and Seaborn showing ~96% of donations were small-dollar by count, while most money came from a few large gifts.

Video Game Sales Database | SI 564 SQL & Databases, individual — Mar–Apr 2026

- Cleaned Kaggle video-game sales and rating data in Python and normalized it into a seven-table MySQL database (games, platforms, genres, publishers, and more) covering 16,717 games.
- Answered six market questions with joins, GROUP BY/HAVING, and subqueries, presented as a business proposal: only 4 of 580 publishers sold 50M+ units in each of North America, Europe, and Japan; games rated 85+ averaged ~6.2x the sales of those rated below 70.

HONORS

Exhibitor, ICFF (2025): thesis chair acquired by a private collector | Honorable Mention, IESNYC Student Lighting Competition (2023)
